ACKNOWLEDGEMENT

The Fibrinolysis, Thrombolysis and Blood Clotting Bibliography was compiled by the National Library of Medicine. Citations were processed by the Library's computer-based Medical Literature Analysis and Retrieval System (MEDLARS). They were printed from film composed by Graphic Arts Composing Equipment (GRACE), MEDLARS' high-speed phototypesetter.

PREFACE

The reader should note that beginning with the January 1970 issue (Volume 6, Number 1) changes have been introduced into the format which are intended to reduce duplication in, and thus ultimate size of, the bibliography and to render it a more efficient and effective access to the subject literature. The new format is described below.

The bibliography has five sections: (1) Subject Section; (2) Review Section; (3) Author Section; (4) Subject Index; and (5) Author Index.

Subject Section

This section is for the reader interested in recent literature related to certain topics. A particular citation may appear more than once if it deals with multiple topics. Each citation to an article contains the full title, first author, and journal reference. If the article is written in a foreign language, the language is indicated. If the citation is to a review article, the number of references is given.

Author Section

The citations in this section are arranged alphabetically according to first author; each article appears only once. The citations are numbered consecutively. These numbers are then used in the Author and Subject Indexes to enable the reader to identify references with ease. The citations found in this section provide a list of key words or index terms assigned to each article. The citations are complete, but only the first three authors are listed. Foreign titles appear in the original language; these titles have been translated into English in the Subject Section. Following each citation are index terms which have been assigned to describe the contents of the article. Index terms appear in capital letters; some of these are accompanied by subheadings which appear in lower case letters; asterisks (*) identify the index terms under which articles appear in Index Medicus.

Subject Index

All of the index terms assigned to citations appearing in the bibliography are listed, followed by citation numbers which correspond to the numbers in the Author Section. This section is included for the convenience of the reader who wishes to select articles falling in categories of his own conception.

Author Index

The names of all authors are listed, followed by citation numbers which correspond to the numbers in the Author Section.

ACENOCOUMAROL

Some aspects of the pharmacology of oral anticoagulants. Coon WW, et al.
